

Dedeco® SUNBURST® Radial Discs

Ideal Tool for Finishing and Polishing Hard-to-Access Areas Without Removing Detail or Causing Flat Spots.

The sharp, clean, specially treated ceramic abrasive grain embedded throughout the flexible bristles enables them to work faster and last longer than rubber wheels, brushes, buffs and conventional sanders.

PRODUCT FEATURES

- Discs generate minimal dust and heat
- Eliminates the need for polishing compound
- Recommended operating speed for most applications is 3,000 - 18,000 RPM
- Recommended operating speed for woodworking is 5,000 RPM
- Lower speeds allow a softer touch, greater flexibility and more subtle results
- Higher speeds provide more aggressive material removal
- Using the tips of the bristles with light pressure maximizes disc life

Metalworking & Jewelry - Ideal for finishing, smoothing and high-luster polishing of all precise, semi-precious and non-precious metals, acrylics and ceramics.

Woodworking - Superior to sandpaper, flap wheels and other types of sanders, brushes and abrasive wheels used in woodcarving and woodworking. The flexible bristles allow detailed finishing and polishing in curved and irregular spaces. Carvers can remove the "fuzzies" without harming any of the underlying detail. Coarser grits for carving and texturing and finer grits for smoothing, burnishing and polishing.

SUNBURST® Radial Discs - Package of 12 - Item # and LIST Price

Mandrels sold separately. See reverse side for mandrel options.
